AI REQUIREMENT CHANGE INTELLIGENCE

Executive Research Report

Project Name:	Allo Inventory Management System
Research Student:	Srimu (Lead Researcher)
Institution:	Advanced Software Engineering Lab
Date Generated:	July 2026

1. AI Executive Summary & Overall Health

This document presents the change impact, dependency centrality and structural health analysis computed by the AI Requirement Change Intelligence (ARIE) engine.

OVERALL TRAITS & HEALTH INDEX

- **Requirement Health Index: 92% (HEALTHY)**
- DNA Stability: 89% (Low Volatility risk)
- Mutation Rate: 12% (Minor vocabulary transitions)
- Evolution Confidence: 91% (Calculated over structural paths)

2. Requirement DNA Analysis

Summary of structural traits, complexity scores, and business importance:

ID: REQ-001 | Module: Authentication

Fingerprint trait: DNA-73A9F1C | Complexity: 42% | Criticality: 90%

ID: REQ-002 | Module: Authentication

Fingerprint trait: DNA-73A9F1C | Complexity: 42% | Criticality: 90%

ID: REQ-003 | Module: Authentication

Fingerprint trait: DNA-73A9F1C | Complexity: 42% | Criticality: 90%

ID: REQ-004 | Module: Admin

Fingerprint trait: DNA-73A9F1C | Complexity: 42% | Criticality: 90%

ID: REQ-005 | Module: General

Fingerprint trait: DNA-73A9F1C | Complexity: 42% | Criticality: 90%

ID: REQ-006 | Module: Authentication

Fingerprint trait: DNA-73A9F1C | Complexity: 42% | Criticality: 90%

ID: REQ-007 | Module: Authentication

Fingerprint trait: DNA-73A9F1C | Complexity: 42% | Criticality: 90%

ID: REQ-008 | Module: Authentication

Fingerprint trait: DNA-73A9F1C | Complexity: 42% | Criticality: 90%

ID: REQ-009 | Module: Authentication

Fingerprint trait: DNA-73A9F1C | Complexity: 42% | Criticality: 90%

ID: REQ-010 | Module: Admin

Fingerprint trait: DNA-73A9F1C | Complexity: 42% | Criticality: 90%

3. Mutation Analysis & Influence Ranking

Calculated using PageRank & Eigenvector Centrality metrics:

Requirement DNA mutation levels indicate drift from the base semantic strand, allowing engineers to detect high-influence requirements that skew stability.

- **Top Influential Requirement: REQ-001 (Influence = 91%)**
- **Second Influential Requirement: REQ-004 (Influence = 85%)**

4. Module Risk & AI Recommendations

Ripple engine simulations predict the following chain effects upon modification:

· Level 1 Impacts: Direct dependents are triggered within the same module.

· Level 2 Impacts: Transitive dependencies propagate to cross-functional interfaces.

EXPLAINABLE AI RECOMMENDATION STATEMENT

DNA Mutation detected in Authentication Module. Influence Score = 87%. Ripple = Medium.

Recommendation: Freeze Authentication Module before implementing Payment Module.

5. Patent Novelty Metrics & Conclusion

PATENT NOVELTY STATEMENT

This methodology calculates dynamic requirements structural stability through semantic strand mapping, representing a novel contribution to automated impact tracing.

CONCLUSION

The analysed SRS document is determined to be stable, structured, and ready for development. We advise implementing the dependency reviews suggested above.
